Quaternary Amine Impregnated Clay (Liquid Phase)

This adsorbent media is granular clay impregnated with a quaternary amine solution blended with anthracite coal to preclude binding. The quaternary amine has an excellent ability to capture *free-phase or mechanically emulsified* oil, grease, and organic compounds from water.

Typical Applications

Groundwater, wastewater, industrial stormwater, wood treatment, paint stripping, car wash, boiler feed water, parts cleaning

Typical Contaminants

Gasoline, diesel, jet fuel, fuel oil, PCBs, pentachlorophenol (PCP), and organic pigments

Typical Physical Properties*

| | |
|----------------------------------|------------------------|
| Apparent density (dense packing) | 61 lbs/ft ³ |
| Moisture Content (as packed) | < 8% (maximum) |
| Mesh Size | 8x30 |

* Please consult with Carbonair for your specific application.
